The figures highlighted in bold and italic signify departments from schools using an indicator test other than the Edinburgh Reading Test.

Department results are ranked this year according to the average subject grade for the department. This does NOT imply that a department with a higher average subject grade did better than another department lower down the table:

Were some groups low attainers anyway?

Look at the average Group grade and difference between that and the subject average grade.

What were the relative abilities of the groups?

Look at the Indicator mean score to see the average ability of the group as judged by the prior test

Were some departments able to give much more personal attention to pupils?

Consider the size of the group taking the subject.

What exam syllabus was being followed? Was it modular? Was it easier?

Look at the exam syllabus and exam board that were used by the different departments.

All of these factors, plus others besides, need to be taken into account before deciding that the performance of one department was better than another.
